

Connect EC2 Ubuntu Server to VS Code & Create Files/Folders

Step 1: Install VS Code Extension

Open VS Code → Extensions (Ctrl + Shift + X)
Install: Remote - SSH

Step 2: Open SSH Config File

Press Ctrl + Shift + P
Type: Remote-SSH: Open SSH Configuration File
Choose: C:\Users\krish\.ssh\config

Step 3: Add EC2 Server Details

```
Host aws-server
HostName 13.212.2.178
User ubuntu
IdentityFile C:\Users\krish\Desktop\vcubeserver.pem
```

Step 4: Connect to EC2 Server

Press Ctrl + Shift + P
Type: Remote-SSH: Connect to Host
Select: aws-server

Step 5: Open Server Folder

Go to File → Open Folder
Open: /home/ubuntu/
Click OK

Step 6: Create Folder in Server

Right click in Explorer → New Folder
Example: project

Step 7: Create File in Server

Right click on folder → New File
Examples: app.py, index.html, main.js

Step 8: Create Files Using Terminal

```
mkdir project
cd project
touch app.py
touch index.html
touch main.js
```

Step 9: Run Python File

```
Example:
print("Hello from EC2 Server")
```

```
Run:
python3 app.py
```

Step 10: Fix Permission Error

```
chmod 400 /c/Users/krish/Desktop/vcubeserver.pem
```

Step 11: Test SSH Connection

```
ssh -i /c/Users/krish/Desktop/vcubeserver.pem ubuntu@13.212.2.178
```
